

More than cleaning

# POWERJET COMPACT CNp

Small power package for High Purity requirements

The two-stage PowerJet COMPACT CNp system only takes up just under 4 m<sup>2</sup> of space and, in addition to the standard cleaning process of cyclic nucleation (CNp<sup>®</sup>) and to the ultrasound, also has the necessary drying performance for higher demands. This can be implemented in the form of hot air as well as with infrared vacuum drying.

- » base area only approx. 4 m<sup>2</sup>
- » configurable in two versions
- » CNp and ultrasound
- » hot air drying or infrared vacuum
- » Suitable for grey or clean room connection
